UPDATE YOUR APPLE DEVICES

Apple has disclosed serious security vulnerabilities for **iPhones, iPads and Macs** that could potentially allow attackers to take complete control of these devices. Update your Apple device if it is one or more of these:

- **iPhone6S and later models**

- **several models of the iPad, including the 5th generation and later (*full list [here](#)*)**

- **all iPad Pro models and the iPad Air 2**

- **Mac computers running MacOS Monterey.**

- **The flaw also affects some iPod models.**

To update, open the **Settings** app, tap the **General** icon, then tap on Software **Update.** Wait a moment for your device to check with Apple's servers for the update, called **iOS 15.6.1** if you have a portable device. Once you see the update is available tap the link **Download and install.**

The update for **Mac computers** is **macOS Monterey 12.5.1**.
